Subject: Supplemental Subsurface Investigation
Douglas Aircraft C-6 Facility
Torrance, California
K/J 954019.01

Dear Mr. Stavale:

Kennedy/Jenks Consultants is pleased to submit this report of the findings of additional subsurface investigation at the Douglas Aircraft Company C-6 Facility. The additional investigation is associated with a former hazardous waste accumulation area east of the northeast corner of Building 29.

BACKGROUND

McDonnell Douglas Realty Company retained Kennedy/Jenks Consultants to perform a Phase II subsurface investigation of the northern section of the Douglas Aircraft Company (DAC) C-6 Facility in Torrance, California (Figure 1). The investigation was confined to the area identified by McDonnell Douglas Realty Company as Parcel A. Specific areas of the investigation were identified in an earlier preliminary site assessment as potential area of environmental interest. The findings and conclusions of Kenny/Jenks' subsurface investigation are detailed in the report entitled *Phase II Subsurface Investigation, Douglas Aircraft Company, C-6 Facility, Parcel A, Torrance, California*, submitted to DAC in May of 1996.

Based on the findings and conclusions of the Phase II Subsurface Investigation, Kennedy/Jenks submitted recommendations for further attention at several areas of environmental interest. Among them was a recommendation for additional soil sampling and analysis in the area around sample location 15, which was installed close to a drain in an area formerly used as a hazardous waste accumulation site. Samples collected from location 15 contained VOCs including 1,1-dichloroethane (1,1-DCA), 1,1-dichloroethene (1,1-DCE), tetrachloroethene (PCE), and trichloroethene (TCE).

Mr. Mario Stavale
McDonnell Douglas Realty Company

Page 2

SCOPE OF WORK

Kennedy/Jenks mobilized to the site on 15 July 1996. Two soil borings were drilled to depths of 40 feet below ground surface (bgs). The borings are located at the northwest and southeast corners of the hazardous waste accumulation area, and are designated 15A and 15B, respectively. Prior to drilling, a utility clearance was performed on the boring locations using a geophysical survey. Soil samples were collected at 5-foot intervals in pre-cleaned brass sample sleeves using a truck-mounted, hydraulically-driven sample barrel. Samples were handled in accordance with Kennedy/Jenks Consultants' standard operating guidelines.

Each boring was logged onsite by Kennedy/Jenks personnel following the Unified Soil Classification System. Drill cuttings and soil samples were visually evaluated for the presence of chemical staining and were monitored for volatile organic compounds (VOCs) using a portable photoionization detector (PID). Detailed logs of both borings are presented in Appendix A.

All soil samples were transported to a State-certified laboratory for analysis under proper chain-of-custody procedures. From both borings, the soil samples collected at depths of 10, 25, 30, 35, and 40 feet bgs were analyzed for VOCs using EPA Method 8010/8020. The remaining samples were placed on hold pending the results.

FINDINGS OF THE INVESTIGATION

The subsurface conditions in both borings consist generally of fine-grained soils. Mottled dark olive brown and very dark gray brown, firm silty clay underlies the surface to a depth of about 8 to 10 feet bgs. Silty clay is underlain by olive brown, firm, very fine- to fine-grained sandy silt. Sandy silt extends to a depth of about 35 feet bgs, and is interrupted by a silty clay lens at 25 feet bgs in boring 15A. At 35 feet bgs the soil grades to olive brown, very fine- to fine-grained silty sand. Groundwater was not encountered in either boring, but the soil was very moist at a depth of 25 feet bgs in boring 15B.

The analytical results of the soil samples are summarized in Table 1. The complete laboratory report is presented in Appendix B. Figure 2 shows the detections made in the soil samples compared to the results of soil samples from location 15 of the previous investigation. VOCs were not detected in any of the soil samples from boring 15A. Four analytes were detected in samples from boring 15B, including 1,1-DCE, PCE, TCE, and trichlorofluoromethane (TCFM). The concentrations of TCE trended from 10 µg/kg at 10 feet bgs, reached a maximum of 140 µg/kg at 25 feet bgs, decreased to 8 µg/kg at 35 feet bgs, and <5 µg/kg at 40 feet bgs.

CONCLUSIONS

Based upon the results of the Phase II Subsurface Investigation and this additional investigation, Kennedy/Jenks concludes the following:

- The lack of detections in soil samples from boring 15A suggests that the soil contamination does not extend laterally beyond the concrete pad to the northwest.

Mr. Mario Stavale
McDonnell Douglas Realty Company
14 August, 1996
Page 3

- The VOCs detected in boring 15B reach maximum concentrations at a depth of 25 feet bgs, and do not extend vertically more than 35 feet bgs.
- The maximum concentrations in boring 15B correspond in depth with the maximum concentrations found in boring 15.
- In general the concentrations of contaminants are lower at the corresponding depths in boring 15B than in boring 15. As an exception, the 1,1-DCE level is higher in 15B at 25 feet bgs than in boring 15. These data suggest that boring 15 is closer to the source of the soil contamination than boring 15B, and that the contamination dissipates over a short distance. A drain located close to boring 15 may represent the source for these compounds in the soil. The soil should be closely monitored when excavating in this vicinity.

Kennedy/Jenks appreciates the opportunity to perform this additional investigation. Should you require additional information, or have any questions, please contact the undersigned.

Very truly yours,

KENNEDY/JENKS CONSULTANTS

Project I.D.: 954019.01

Location: DOUGLAS AIRCRAFT

Report On: SIX SOLID SAMPLES ANALYZED AS SPECIFIED ON ATTACHED CHAIN OF CUSTODY

This report certifies that the samples were received in good condition (i.e. intact, chilled, and/or preserved appropriately) and that strict chain of custody procedures were adhered to at all times. It further certifies that the methods of analysis used are in fact those listed within this report and that Curtis & Tompkins, Ltd. has current certification for all work performed in the laboratory. Exceptions to this statement are specifically noted in the analytical report or on the attached chain of custody.

ABBREVIATIONS

BS/BSD - Blank Spike / Blank Spike Duplicate

BTEX - Benzene, Toluene, Ethyl Benzene, and Total Xylenes.

CCR - California Code of Regulations.

DHS - California Department of Health Services.

EPA - United States Environmental Protection Agency.

LCS - Laboratory Control Spike

LUFT - Leaking Underground Fuel Tank.

MDL - Method Detection Limit

NA - Not Applicable.

NC - Not Calculable

ND - Not Detected at or above the defined detection limit.

PQL - Practical Quantitation Limit

RPD - Relative percent difference.

STLC - Soluble Threshold Limit Concentration.

Surr. - Surrogates.

TCLP - Toxicity Characteristic Leaching Procedure.

TEH - Total Extractable Petroleum Hydrocarbons.

Title 26 - Title 26 of the California Code of Regulations (CCR).

TR~ - Trace, estimated value .

TTLC - Total Threshold Limit Concentration.

TVH - Total Volatile Hydrocarbons.

WET - Waste Extraction Test.

UNITS

cm³ - Cubic centimeter umhos/cm - uS/cm - Micro Siemens/centimeter

Kg - kilogram. ppb - Parts per billion.

L - Liter.

mg - Milligrams.

M³ - Cubic meter.

ppm - Parts per million.

ug - Micrograms.

ppbv - Parts per billion per unit volume

LABORATORY REPORT

Laboratory Number: 214611

Page 1 of 11

Date Received: 07/15/96

Date Reported: 07/19/96

Issued To: KENNEDY/JENKS CONSULTANTS
2151 MICHELSON
IRVINE, CA
ATTN: JAY KNIGHT

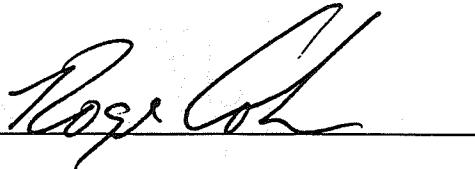

Project I.D.: 954019.01

Location: DOUGLAS AIRCRAFT

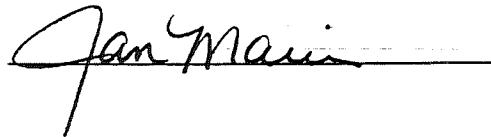

Report On: FIVE SOLID SAMPLES ANALYZED AS SPECIFIED ON ATTACHED CHAIN OF CUSTODY

This report certifies that the samples were received in good condition (i.e. intact, chilled, and/or preserved appropriately) and that strict chain of custody procedures were adhered to at all times. It further certifies that the methods of analysis used are in fact those listed within this report and that Curtis & Tompkins, Ltd. has current certification for all work performed in the laboratory. Exceptions to this statement are specifically noted in the analytical report or on the attached chain of custody.

(1) Write only one sample number in each space.

(2) Specify type of sample(s): Water (W), Solid (S), or indicate type.

(3) Mark each sample which should be composited in Laboratory as follows: Place an "A" in box for each sample that should be composited into one sample; use sequential letter for additional groups.

(4) Preservation of sample.

(5) Write each analyses requested across top. Place an "X" in appropriate column to indicate type of analysis needed for each sample.

ABBREVIATIONS

BS/BSD - Blank Spike / Blank Spike Duplicate

BTEX - Benzene, Toluene, Ethyl Benzene, and Total Xylenes.

CCR - California Code of Regulations.

DHS - California Department of Health Services.

EPA - United States Environmental Protection Agency.

LCS - Laboratory Control Spike

LUFT - Leaking Underground Fuel Tank.

MDL - Method Detection Limit

NA - Not Applicable.

NC - Not Calculable

ND - Not Detected at or above the defined detection limit.

PQL - Practical Quantitation Limit

RPD - Relative percent difference.

STLC - Soluble Threshold Limit Concentration.

Surr. - Surrogates.

TCLP - Toxicity Characteristic Leaching Procedure.

TEH - Total Extractable Petroleum Hydrocarbons.

Title 26 - Title 26 of the California Code of Regulations (CCR).

TR~ - Trace, estimated value .

TTLC - Total Threshold Limit Concentration.

TVH - Total Volatile Hydrocarbons.

WET - Waste Extraction Test.

UNITS

cm³ - Cubic centimeter

umhos/cm - uS/cm - Micro Siemens/centimeter

Kg - kilogram.

ppb - Parts per billion.

L - Liter.

ppm - Parts per million.

mg - Milligrams.

ug - Micrograms.

M³ - Cubic meter.

ppbv - Parts per billion per unit volume

Project No. 954019.01

Phone

- (1) Write only one sample number in each space.
(2) Specify type of sample(s): Water (W), Solid (S), or indicate type.
(3) Mark each sample which should be composited in Laboratory as follows: Place an "A" in box for each sample that should be composited into one sample; use sequential letter for additional groups.
(4) Preservation of sample.
(5) Write each analyses requested across top. Place an "X" in appropriate column to indicate type of analysis needed for each sample.
